EXPERIENCE

Senior Software Engineer

SeekOut - AI Recruiting Platform

Nov 2024 - Present

Bengaluru, IN

- Building the backend infrastructure for an **agentic AI recruiting service** that delivers qualified candidates in under 2 weeks. Integrating **semantic AI matching**, multi-step outreach campaigns, and automated screening workflows to process **thousands of candidate profiles**, reducing time-to-hire by over **50%**.
- Architected **PitchBot**, an AI-driven voice agent platform that transforms static content into dynamic, interactive voice experiences. Built a **real-time voice pipeline** using Deepgram (speech-to-text), Cartesia Sonic (text-to-speech), and Pipecat for orchestration — achieving **sub-second latency** for live conversational AI interactions.
- Developed the **analytics and transcript layer** for the voice agent platform, capturing and storing conversations in blob storage, extracting key pitch metrics, and relaying events to analytics dashboards. Built both **frontend and backend** components including an admin dashboard for managing presentations with slide-level editing.
- Built **large-scale ETL pipelines** to ingest data from multiple Applicant Tracking Systems (ATS) and Learning Management Systems (LMS), including end-to-end integration of a new LMS provider delivered within a single quarter.
- Re-architected the **GitHub data indexing pipeline** for **~50M user profiles**, migrating to a new data provider and reducing **17 intermediate processing tasks to just 7** — cutting pipeline complexity by **60%** while writing new parsing algorithms for data-intensive operations.
- Improved **profile matching accuracy from ~45% to ~89%** by optimizing search queries and proposing a **GPT-based auto-mapping service** to link external HR data with public profiles — designed as a reusable service extensible across indexing and data enrichment use cases.
- Delivered a major **product-level refactoring** to introduce hierarchical requisition support, enabling analytics dashboards across the recruiting platform. Owned the goal end-to-end, collaborating with peers to refactor legacy workflows and integrate ATS stage mappings.
- Worked with **large-scale search indexes (Azure AI Search)** to scan and query across millions of documents for candidate discovery and matching.

Lead Software Engineer

Skyserve.ai - Edge Computing on Satellites

Sept 2022 - Oct 2024

Bengaluru, IN

- As a **Founding Engineer**, led the development of a ML Ops platform for satellite edge computing, akin to Amazon SageMaker but tailored for space-grade hardware. Reduced AI/ML model onboarding time from **months to 2-3 days**, enhancing efficiency by 90% and validating over 50 models across satellite providers with diverse hardware constraints.
- Developed a **high-performance data rendering system**, handling 700+ datasets and improving frontend load times by 70%, reducing data transfer by 40% using **tiling and caching mechanisms**.
- Architected a **synthetic image generator** simulating real-world hardware conditions, generating and testing 250+ custom image frames with various environmental variables to ensure model robustness.
- Proposed and implemented an AI-driven data aggregation platform, processing data from **3 satellite sources to run 10 ML pipelines, generating 30 datasets for 10 cities**. Improved data processing efficiency by 40%.
- Led end-to-end development for **4 high-impact projects**, collaborating with co-founders, product managers and cross-functional teams to define milestones, prioritize features, and deliver solutions iteratively.

EDUCATION

Bachelor of Technology in Information Technology

NATIONAL INSTITUTE OF TECHNOLOGY RAIPUR

Aug 2015 - Jun 2019

SKILLS

Languages: Go, Python, C#, Javascript, C++, PHP, .NET8

Database: MySQL, PostgreSQL, Redis, Azure Cosmos DB, Blob Storage, Geoparquet

DevOps/Cloud: Azure (AI Search, Cosmos DB, Blob Storage, App Service), AWS (S3, SES, EC2, SageMaker), Docker, Jenkins, Grafana

Technologies: Apache Kafka, RabbitMQ, ETL Pipelines, Elasticsearch, LLM/GPT Integration, Agentic AI/Coding, Real-time Voice AI (Deepgram, Pipecat), Machine Learning, Geospatial (GDAL, H3), IoT

PATENT

Wearable IoT device utilizes Crowd Sourcing Utility for real-time alerts via advanced nearby proxy algorithms. Integrates web dashboard for analytics, achieving sub-500ms search time among 1 million users for proximity-based communication.

LEADERSHIP

- Led and mentored a **6-member engineering team to develop over 4 core products** for the company.
- Conducted weekly discussions with CTO, CPO, and subject matter experts to strategize product and technical architecture.
- Served as Head Coordinator of Entrepreneurship Cell at NIT Raipur during college tenure.

Full Stack Developer

Unwired Labs - Device Positioning without GPS

📅 Feb 2020 – Aug 2022

📍 Hyderabad, IN

- Enhanced Geolocation and Geocoding APIs by optimizing algorithms, scaling to serve **1 billion daily** requests.
 - Designed backend services with **job scheduling systems processing 10-20 million daily jobs**, improving queue management and resource utilization.
 - Built a **data enrichment pipeline parsing 4.8 million records daily**, integrating IoT device logs to enhance a database of 200 million cells and 4 billion Wi-Fi data points.
-

Business Technology Analyst

Deloitte USI

📅 Jul 2019 – Jan 2020

📍 Hyderabad, IN

- Refined the Organization Space Calculator, analyzing space needs for headcount growth projections (up to 10k members) and devising over 20 seat sharing strategies.
- Spearheaded QA efforts for IBM Tririga platform, validating scripts with a focus on SAP integration, ensuring system integrity and functionality.

ACHIEVEMENTS

- Presented at **Google DevFest Raipur 2023**, educating 500+ attendees on AI for Earth Observation, fostering awareness among tech enthusiasts.
- Speaker at Geospatial Meet "Lets Talk Spatial" in Bengaluru, addressing 150 attendees on making **AI Models Edge Ready for Satellite** Onboard processing.
- Recognized with a Spot Award at Deloitte among 30 employees for outstanding work and contributions.
